Patent Portfolio

Axis Power: High-Performance Propulsion, *Re-Engineered*

Axis Power designs and manufactures zero-emission and renewable-fuel electric sports cars for the premium, high-performance sports car market.

By rethinking sports car architecture from the ground up, our technology delivers savage torque, continuous high-output endurance, and visceral mechanical engagement without a carbon footprint. Axis Power allows high-performance sports cars to achieve true sustainability without sacrificing range, speed, or weight.

Our revolutionary clean-technology innovations are protected by **global patent-pending status**, securing our proprietary vehicle-propulsion architecture, internationally:

GB2601235.1 – Axis 2-Cycle Multi-Fuel Duo-Flux Engine

GB2623485.6 – Axis Electro-Magnetic-Hybrid Drivetrain

GB2601237.7 – Axis Hydrogen/Gaseous Fuel Amplification & Injection System

GB2508563.0 – Axis High Energy Density MOF Hydrogen Storage Pressure Vessel

GB2520084.1 – Hybrid Heat-Recovery Power and Compound Boost System for Internal Combustion Engines

GB2520084.1 - Hybrid Heat-Recovery Power and Compound Boost System for Internal Combustion Engines

Axis: The New Architecture of Speed.
